

Data Riders Consulting

Shaping a Sustainable Future in Mining

Company Presentation

2024 Data Riders. All rights reserved

Name: Data Riders Educação e Consultoria LTDA CNPJ: 29.742.713/0001-02 Address: Av. Getúlio Vargas 1300, sala 1301 Belo Horizonte, MG / Brasil ZIP 30112-024 www.datariders.com.br Data Riders Consulting focuses on excellence in the management of critical assets and the implementation of international best practices in the mining sector.

Specializing in management consulting, it focuses on the implementation and verification of global mining standards, such as:

GISTM Global Ind. Standard on Tailings Management

TSM Towards Sustainable Mining

The Copper Mark.

The company supports the industry in the transition towards safer, more efficient, and sustainable operations, with solid experience in delivering practical and effective solutions for its clients.

Specialized technical consultancy services

Implementation of dam and tailings management systems

Gap analysis in compliance with GISTM

Specialized consulting in management systems and compliance, focusing on the application of global standards and audits (TSM and The Copper Mark) Organizational structuring to optimize processes and strengthen Governance

Development and review of regulatory documents and
technical procedures focused on tailings, water, and HSS (Health, Safety, and Environment)

Change management and knowledge management methodologies to ensure the adoption of best practices

Certified Verifier

TOWARDS SUSTAINABLE MINING

Certified Assessor

RESPONSIBLY PRODUCED COPPER

Integrated scope to support the compliance process with international best practices

Framework DMAIC (Define, Measure, Analyze, Improve, Control)

- Perform project management and control activities through the PMO (Project Management Office).
- Keep the Gap Analysis Report updated as the project progresses.
- Continuously update the Gap Closure Plan to reflect changes and progress made.
- Root cause analysis of the gaps from the perspective of Engineering, Processes and People, followed by a benchmarking study of international best practices, and identification of countermeasures and objectives to remedy the identified gaps.
- Conducting workshops to define and validate countermeasures, objectives, and required actions, including responsibilities and duration. Use GUT Analysis to prioritize actions and group interrelated actions into macro activities, culminating in the definition and validation of the Gap Closing Roadmap with leadership.
- Preparation and presentation of the Gap Closure Plan, followed by its implementation, in addition to supporting change management through communications, training and continuous improvement initiatives.

- Formation of the work team and identification of stakeholders.
- Establishment of the follow-up routine based on the 5Ps and creation of compliance control spreadsheets.
- Conducting the Kick-off meeting with initial presentation of the scope.
 - Request and take receipt of documentation on governance and management model.
 - Request and receipt of documentation related to the site and structures.
 - Conduct technical visits for on-site evaluation.
 - Analysis of documentation to identify needs for additional interviews, surveys, and requests, followed by conducting these activities as needed.
 - Execution of the Gap Assessment focusing on Engineering, Processes and People, categorizing the findings as: Meets, Partially Meets or Does Not Meet.
 - Conducting a workshop to validate the Gap Analysis with the project team and key stakeholders, and reviewing and validating the final version of the Gap Analysis Report.

TSM (Towards Sustainable Mining) Performance Rating System

and

Communities

Environment and

In numbers: 8 topics, 30 performance indicators, and 428 evaluation items

The goal is for each facility to reach at least level A.

Level	Criteria
AAA	Excellence and leadership.
AA	Systems and processes are integrated into management decisions and business functions.
Α	Good practice. Systems and processes are developed and implemented.
В	Procedures exist, but they are not fully consistent or documented. Systems and processes are planned and being developed.
С	No system is in place. Activities tend to be reactive. Procedures may exist, but they are not integrated into policies and management systems.

Note: Topics 3. Crisis Management and Communication Planning and 4. Prevention of Child Labour and Forced Labour use a different method of binary assessment: YES and NO.

	TSM Performance Indicators	Ev.
	Indigenous and Community Relations 1.1 Identification of the Community of Interest (COI) 1.2 Effective Engagement with the COI and Dialogue 1.3 Effective Engagement with Indigenous People and Dialogue 1.4 Benefits and Community Impact Management 1.5 COI Response Mechanism	91 11 24 18 27 11
People	2 Health & Safety 2.1 Commitment and Accountability 2.2 Planning and Implementation 2.3 Training, Behavior, and Culture 2.4 Reporting & Monitoring 2.5 Performance	83 15 19 20 17 12
	3 Crisis Management and Communication Planning 3.1 Crisis management and communication agility 3.2 Revision 3.3 Training	39 24 10 5
	4 Prevention of Child Labor and Forced Labor 4.1 Prevention of Forced Labor 4.2 Prevention of Child Labor	5 3 2
	5 Management of Energy Use and Greenhouse Gas (GHG) Emissions 5.1 Energy use and greenhouse gas (GHG) emissions management systems 5.2 Reporting systems for energy use and greenhouse gas (GHG) emissions 5.3 Energy nerformance and greenhouse gas (GHG) emissions	69 29 24
ange	6 Biodiversity Management and Conservation 6.1 Corporate commitment to biodiversity conservation, accountability and communication 6.2 Biodiversity conservation planning in installation and implementation 6.3 Biodiversity Conservation Benotre	38 7 26
limate Ch	7 Tailings Management 7.1 Tailings Management Policy and Commitment 7.2 Tailings Management and Emergency Preparedness System 7.3 Accountability and Responsibility for Tailings Management 7.4 Annual Review of Tailings Management 7.5 Operation Maintenance and Control Manual	47 12 12 10 8
ပ	Section Maintenance and control mandal Section Mandal Section Management Section Management Section Mater M	56 15 22 11 8

* *Ev. It is the number of evaluation items required to rank each Performance Indicator.*

TSM Classification Process References, Steps, and Outputs of the TSM Performance Rating Process

Global standards, international best practice guides, and assessment protocols

TSM - Towards Sustainable Mining:

- •TSM 101: A Primer
- TSM: Responsible Sourcing Alignment Supplement
- •TSM Verification Guide

IBRAM – Towards Sustainable Mining:

- 1. Protocol for the relationship with communities, Indigenous, quilombola and traditional peoples
- 2. Health & Safety Protocol
- 3. Protocol for Crisis Management Planning and Communications
- 4. Protocol for the Verification of the Prevention of Child Labor and Forced or Slave Labor
- 5. Climate Change Protocol
- 6. Biodiversity Conservation Management Protocol
- 7. Tailings Management Protocol
- 8. Sustainable Water Management Protocol

TSM Classification Steps

TSM Performance Rating

- 8 Topics
- 30 Performance Indicators
- 428 Ratings
- Observations and
- Recommendations
- Reference Documentation
- Technical Support
- ICMM Supplement
- Ongoing technical support

Proper management of geotechnical assets is critical to ensuring the safety, efficiency, and continuity of operations in sectors such as mining. This management is underpinned by a robust organizational structure and effective lines of communication.

The organizational structure for the management of tailings and geotechnical assets is outlined by key roles that perform important complementary functions

Excellence in management through our integrated approach from the perspective of People, Processes and Technology

Implementation, participation and support in the processes and mechanisms of review of geotechnical structures and mining tailings dams

Independent Review

Objective and impartial analysis of the various aspects related to the structures, including the characterization of the site, engineering models, and the intention of the project, assumptions and criteria adopted. This review is crucial to ensure that the project is executed in accordance with the necessary safety and efficacy standards.

Operational Assessment

Conducted to review the operating procedures in place, including the tailings transportation and disposal plan, water management, and risk assessment and management. Through these assessments, it is possible to identify potential failure modes and implement corrective measures to ensure the safe operation of the dam.

TMS (Tailings Management System) Review

The TMS review involves analyzing the corporate tailings management policy, functional and organizational structure, lines of communication, and the effectiveness of the response in case of emergencies. It is a crucial mechanism to ensure that tailings management is carried out effectively and safely.

Audit

An audit is a formal, systematic, and documented assessment of a tailings facility's compliance with explicit, agreed, and prescribed criteria. It includes the review of legal requirements, operator policies and commitments, applicable standards and performance expectations.

Dam Safety Review

This review aims to provide a statement on the safety of the facility, including the assessment of technical, operational, and governance aspects. The goal is to ensure that the dam meets the design intent and applicable safety criteria, without posing unacceptable risks.

Evaluation of alternatives and multicriteria analysis of Tailings Storage Facilities

Established methodology, in accordance with global standards and international best practices

Standards, good practice guides, Normative and regulatory documents

ICMM - International Council on Mining and Metals:

- Tailings Management: Good Practice Guide
- Global Industry Standard on Tailings Management: Conformance Protocols
- Tailings Reduction Roadmap

TSM - Towards Sustainable Mining:

- Tailings Guide Implementation Checklist
- A Guide to the Management of Tailings Facilities

Mining and Processing Division, Environment Canada:

• Guidelines for the Assessment of Alternatives for Mine Waste Disposal

ANM Laws, Standards and Resolutions

Development Steps: Multicriteria Decision Analysis

Evaluation of Alternatives and Multicriteria Analysis of Tailings Storage Facilities

Development and review of normative documents, technical and management procedures

10 steps in the development and review process

1. Planning

Definition of the scope, identification of normative documents and technical procedures that need development / revision.

Mobilization of the team composed of technical and management specialists.

Preparation of the schedule and distribution of the necessary resources.

2. Collection and

Organization of Documents

Collection of all relevant documents and procedures.

Organization and distribution in a logical and accessible way, for example, on a secure digital platform.

3. Preliminary Analysis

Conducting a preliminary analysis to identify inconsistencies, outdatedness, or areas for improvement.

Comparison of documents and procedures with global standards and with international and local legal and technical standards.

4. Stakeholder Consultations

Conducting interviews and meetings with internal and external stakeholders to obtain comments and feedback on the documents and procedures.

Request for suggestions and improvements, and identification of areas of risk or non-compliance.

5. Technical and Legal Review

Analysis and review of documents and procedures in light of applicable legal and technical regulations.

Identification of implementation and/or change needs to ensure compliance and operational efficiency.

10. Continuous Monitoring and Evaluation

Establishing an ongoing monitoring and evaluation process to ensure that documents and procedures remain relevant and compliant. Collecting feedback and performance data to inform future reviews.

9. Implementation

Communication of documents to all interested parties. Provision of training as needed to ensure understanding of and compliance with documents and procedures.

8. Final Approval

Submission of proposals for final approval by company leadership and relevant committees. Documentation of all approvals and feedback received.

7. Internal Validation

Conducting workshops and meetings to validate the proposals with the relevant teams.

Review and adjustment of proposals based on feedback received.

6. Development and Proposed Changes

Development of

implementation and/or change proposals based on findings.

Preparation of documents and technical support that justify the implementations and/or proposed changes.

Our international consultants bring together years of accumulated expertise in areas such as Mining, Energy, Logistics and Technology, coming from different regions of the world.

With global experience, we offer complementary expertise in:

- Geotechnical engineering and tailings management
- Governance structures and management systems
- Change management and stakeholder engagement
- Artificial intelligence and emerging technological innovations

We actively contribute to global mining standards, with renowned publications in geotechnics, hydrogeology, governance, technology, and other initiatives.

Thank you.
